## DETAILED ACTION

### *Drawings*

1. Figure 7 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 4,351,160 to Kountz et al. (Kountz et al.).

#### In Reference to Claim 1

Kountz et al. teach a variable inner volume ratio-mode inverter screw compressor comprising (see figure 3):

a variable inner volume ratio valve (slide valve member (40)) changing completion time of a compression step in a screw compression section to make inner volume ratio variable (see column 4 lines 23-27);

an electric motor (induction motor (72)) rotationally driving the screw compression section (see column 4 lines 59-61); and

an inverter (inverter (74), see figure 1) controlling rotational frequency of the electric motor corresponding to a load (see column 5 lines 4-7).

#### In Reference to Claim 2

Kountz et al. teach the variable inner volume ratio-mode inverter screw compressor as set forth in claim 1 (see the rejection of claim 1 above), comprising:

a control section (logic circuit (83) and valve control circuit (94)) controlling an opening degree of the variable inner volume ratio valve based on suction side pressure and discharge side pressure of the screw compression section and rotational frequency of the electric motor (The valve control circuit (92) controls the position of the slide valve member (42) based on suction passage pressure  $P_1$  and discharge passage pressure  $P_2$ , which vary based on the speed of the motor, which is controlled by the inverter. See column 5 lines 8-58. ).

#### **Conclusion**

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 6,659,729 to Hattori et al. teaches a similar control system for a screw compressor.
